

PROPOSED FUNCTIONAL SCOPE

Daina Delivery Application

A complete parcel-booking and delivery solution for customers and drivers

Document Purpose: This document explains what the application will do, how customers and drivers will use it, and how a delivery will move from booking to successful completion.

Project	Daina Delivery Application
Platforms	Android and iOS mobile application
Application Users	Customer and Delivery Driver
Document Status	For Client Review and Approval

Note: The Admin Panel is not included in this scope.

1. Project Overview

Daina will connect customers who need to send parcels with nearby delivery drivers. Customers will be able to create a delivery request, view the expected fare, select a driver, track the delivery, communicate with the driver, and confirm completion. Drivers will be able to receive requests, manage trips, navigate to pickup and drop-off locations, and track earnings.

Main Objective: To make parcel delivery simple, fast, secure, and transparent from the moment a booking is created until the parcel is delivered.

2. Application Users

User	Primary Goal	What the App Provides
Customer	Send a parcel	Booking, fare estimate, driver selection, live tracking, chat, payment and order history.
Driver	Complete deliveries	Request management, route navigation, delivery updates, proof of delivery, wallet and earnings.

3. Customer Application

Account and Profile

- Register or sign in using the available authentication method.
- Verify the account through OTP where applicable.
- Create, view, and update personal profile information.
- Select the preferred application language and manage notifications.

Create a Delivery

- Select the parcel pickup location and delivery destination on the map.
- Enter parcel information, including description, category, size, weight, and special handling instructions where required.
- Upload a parcel image so the driver can identify the package.
- Choose the suitable delivery vehicle according to parcel requirements.
- View the estimated delivery fare before sending the request.
- Book an immediate delivery or schedule it for a future date and time.

Driver Selection and Confirmation

- View nearby available drivers.
- Send the delivery request to suitable drivers.
- Review a driver's offer or counteroffer before confirmation.
- Accept the selected offer and confirm the delivery booking.

Customer Application — Continued

During the Delivery

- Track the driver's live location and follow the delivery status.
- View driver, vehicle, parcel, pickup, and drop-off information.
- Chat with the assigned driver inside the application.
- Receive relevant booking and delivery notifications.
- Share tracking information with the receiver where this option is enabled.

Payment and Completion

- Pay using the payment methods approved for the project, such as online payment or cash.
- View payment information and the final delivery amount.
- Receive delivery confirmation after the driver completes the order.
- Rate the delivery experience and provide feedback.

Orders and Support

- View ongoing, completed, and cancelled orders.
- Open an order to review its complete details and status history.
- Repeat a previous delivery where the repeat-order option is enabled.
- Access help, legal information, privacy policy, and account settings.
- Request account deletion from the application.

4. Driver Application

Registration and Verification

- Register as a delivery driver and create a driver profile.
- Upload identity and verification documents.
- Add vehicle information and required vehicle documents.
- Submit bank account details for earnings settlement.
- View verification status and receive approval-related notifications.

Availability and Delivery Requests

- Go online or offline depending on availability.
- Receive nearby delivery requests with pickup, destination, parcel, distance, and fare information.
- Accept or reject a delivery request.
- Send a counteroffer when the proposed fare needs to be changed.
- View active and available delivery orders from the driver dashboard.

Trip and Delivery Management

- View the route to the pickup and delivery locations on the map.
- Contact the customer through in-app chat.
- Update the delivery status at each important stage.
- Upload delivery proof, such as a delivery photo or receiver confirmation, where required.
- Mark the order as successfully delivered after completion.

5. Complete Delivery Workflow

- 1. Customer creates a request** — The customer enters pickup, drop-off, parcel, vehicle, and scheduling information.
- 2. Fare is displayed** — The application shows the estimated delivery amount before confirmation.
- 3. Request reaches nearby drivers** — Available drivers can review the request and respond.
- 4. Driver is selected** — The customer accepts a suitable offer or counteroffer.
- 5. Driver travels to pickup** — The customer can track the driver's live location and communicate through chat.
- 6. Parcel is collected** — The driver updates the order status and starts the delivery trip.
- 7. Parcel is delivered** — The driver reaches the destination and submits the required proof of delivery.
- 8. Order is completed** — The final status, payment information, order record, and customer rating are saved.

6. Driver Earnings and Account Management

- View completed delivery history and individual trip details.
- View total earnings and wallet balance.
- Review payment or earnings-related information available in the application.
- Update profile, vehicle, bank, and notification settings.
- Log out or request account deletion when required.

7. Important Project Notes

Topic	Clarification
Admin Panel	The Admin Panel is excluded from this document and is not part of the current client-facing scope.
Payment Methods	Final payment methods will depend on the payment gateway and business approval.
Maps and Tracking	Live location, route, and distance features depend on map services, device GPS, network availability, and required permissions.
Notifications	Push notifications depend on device permissions and notification-service configuration.
Final UI and Text	Screen design, wording, and minor interaction details may be refined during development without changing the approved core functionality.

8. Client Review and Approval

Please review the features and workflow described in this document. Any required addition, removal, or change should be shared before the scope is finalized. Development and final delivery will follow the mutually approved requirements.

Approval Requested: Please confirm whether this scope correctly represents the expected Customer and Driver applications.
